01 About

I'm a software developer at NVIDIA, where I work on firmware verification for Co-Packaged Optics (CPO) and build AI-powered tooling for engineering workflows. Before that, I worked at Intel on SoC physical design and signoff flows.

I like turning messy engineering problems into reliable tools — whether that's a greenfield verification environment, an AI agent that engineers actually adopt, or a debugging workflow that makes firmware behavior legible.

02 Experience

Software Developer, Firmware Verification NVIDIA - Firmware verification engineer for Co-Packaged Optics (CPO); established a greenfield verification environment for a new technology stack. - Initiated and developed AI agents and AI-assisted tooling for CPO engineering workflows, including CPO Monitor, adopted broadly by CPO engineers. - Own multiple verification, monitoring, and debugging tools — MM Validator, Module Monitor, CPO Monitor. - Built AI-enabled monitoring and debugging workflows that improved visibility into firmware behavior, module state, and validation failures. - Won 2nd place in the NVIDIA Networking Hackathon.	2023 — Present
SoC Physical Design Backend Developer, C2DG Core Group Intel - Worked in a full-chip integration group across front-end to back-end delivery, physical design, tool support, and flow development. - Owned backend partition work across synthesis/signoff and supported tape-out readiness checks. - Developed and ran automated central flows for Synopsys and Cadence signoff tools, including FlowTracer-based design execution. - Supported formal-equivalence verification (FEV) full-chip runs and user support. - Recognized by department management for closure-flow development; instructed new employees.	2021 — 2023
Classified Role Office of the Prime Minister	2018 — 2020
Combat Officer, Deputy Company Commander IDF Armored Corps - Captain; led operational teams as deputy company commander and platoon commander. - Awarded a Colonel-level excellence certificate. Reserve duty as platoon commander.	2014 — 2018

03 Skills & Tools

PROGRAMMING Python C C++ Java Tcl Verilog	TOOLS & ENVIRONMENTS Unix / Linux Git Cursor Claude Code Cadence Synopsys	DOMAINS AI agents Firmware verification CPO Computer networking Information security Kernel programming Parallel programming SoC physical design Signoff flows
EDUCATION Tel Aviv University — B.Sc. Electrical Engineering & Computer Science, 2019–2023. Majors: computer communication (EE) and information security (CS). Programming tutor in Python, C, and Java.	HIGHLIGHTS 2nd place — NVIDIA Networking Hackathon. 1st place — national Arduino/GPS final-project competition. React Native volunteer dev — Hagvurah Hackathon.	LANGUAGES Hebrew — native English — very good
